To: Whom it may concern,

Recommendation Letter for Dr. Francesco Pascale

Dr. Francesco Pascale was attached at Department of Industrial Engineering of University of Salerno and, in particular, to my Research Group (Knowman Group - <http://www.knowman.unisa.it/>) since October 2016.

During this period, he attended the Ph.D. School in Industrial Engineering of University of Salerno and I was his advisor. In the next April 2020, Dr. Pascale will defend his Ph.D.'s Thesis: I and the other colleagues of the Ph.D. School consider his research work interesting and good.

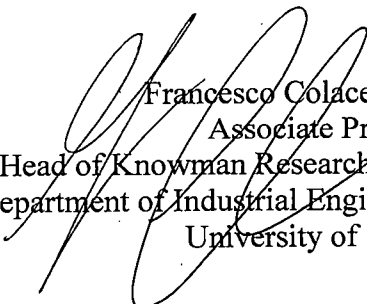

During Francesco's tenure with my research group, he displayed good technical knowledge for all the elements of the research activities, which he was responsible for. Additionally, he demonstrated good teamwork and excellent rapport with other colleagues. He was able to advice well some students during their final degree works in Electronic Engineering.

Francesco had showed resourcefulness in problem solving and had been able to put his technical skills to good effect in almost all areas. As usual in research field, some of the situations required him to think outside the box to deliver the solutions. He put in extra hours as necessary in order to meet specific deadlines that I set. Francesco always takes an active part in scientific discussions, demonstrating maturity and strong ability to defend his ideas while paying careful attention to opponent's remarks.

Socially, Francesco was able to engage all levels of colleagues here in the numerous events organised. He is a good listener and is well liked in University of Salerno. In particular, with a balanced outlook of life off work and coupled with his good working performance, great rapport and friendship within the University of Salerno Community, Francesco will be an asset and will value-add to any organisation he chooses to join.

On behalf of all in my Research Group, it has been my pleasure to be recommending Francesco Pascale.

Yours Sincerely,

Francesco Colace, Ph.D.
Associate Professor
Head of Knowman Research Group
DIIn – Department of Industrial Engineering
University of Salerno
